AI Large Model Development - Chatbot

AI Large Model Development - Chatbot

1. Course Content
2. Starting the Dify Service
3. Chatbot
4. Accessing the Chatbot via the Web

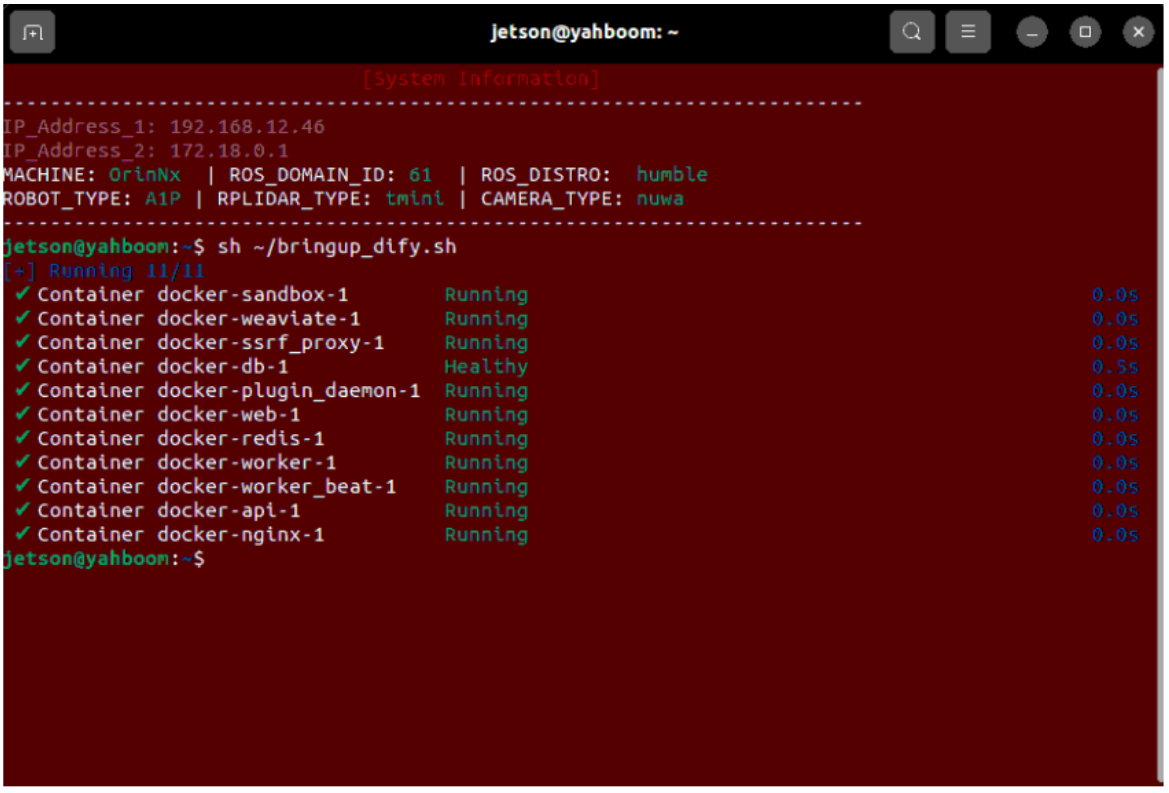

1. Course Content

- Master how to quickly develop a chatbot using Dify.

2. Starting the Dify Service

- Connect to the onboard computer via VNC or SSH, and enter the following command in the terminal:

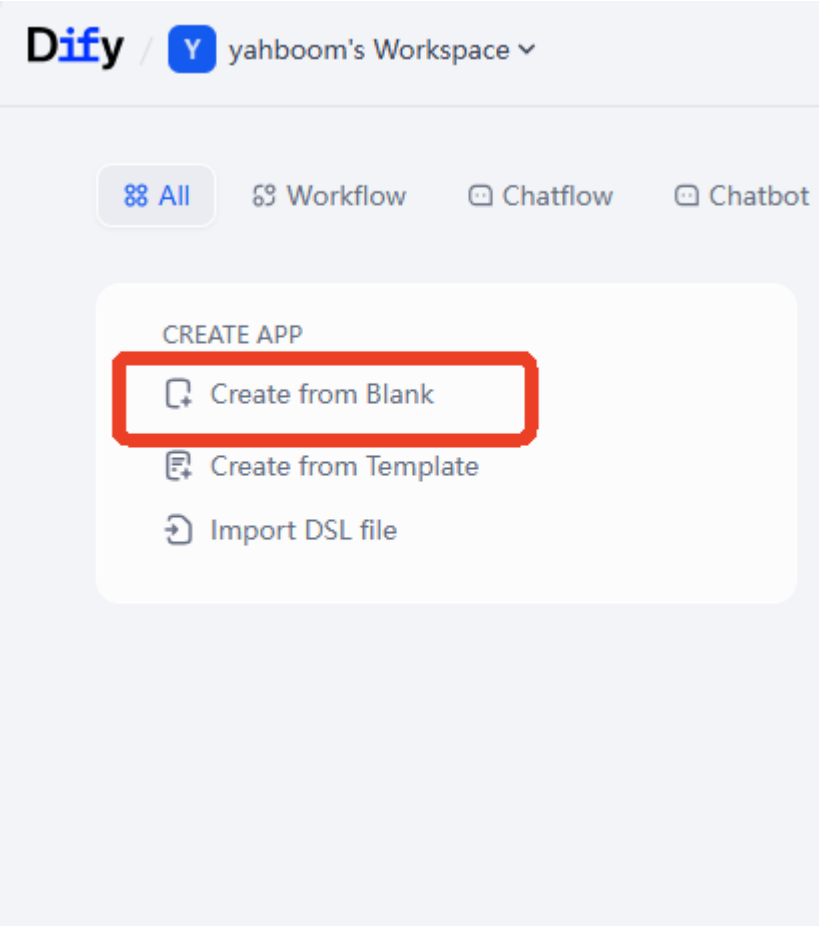

```
sh ~/bringup_dify.sh
```

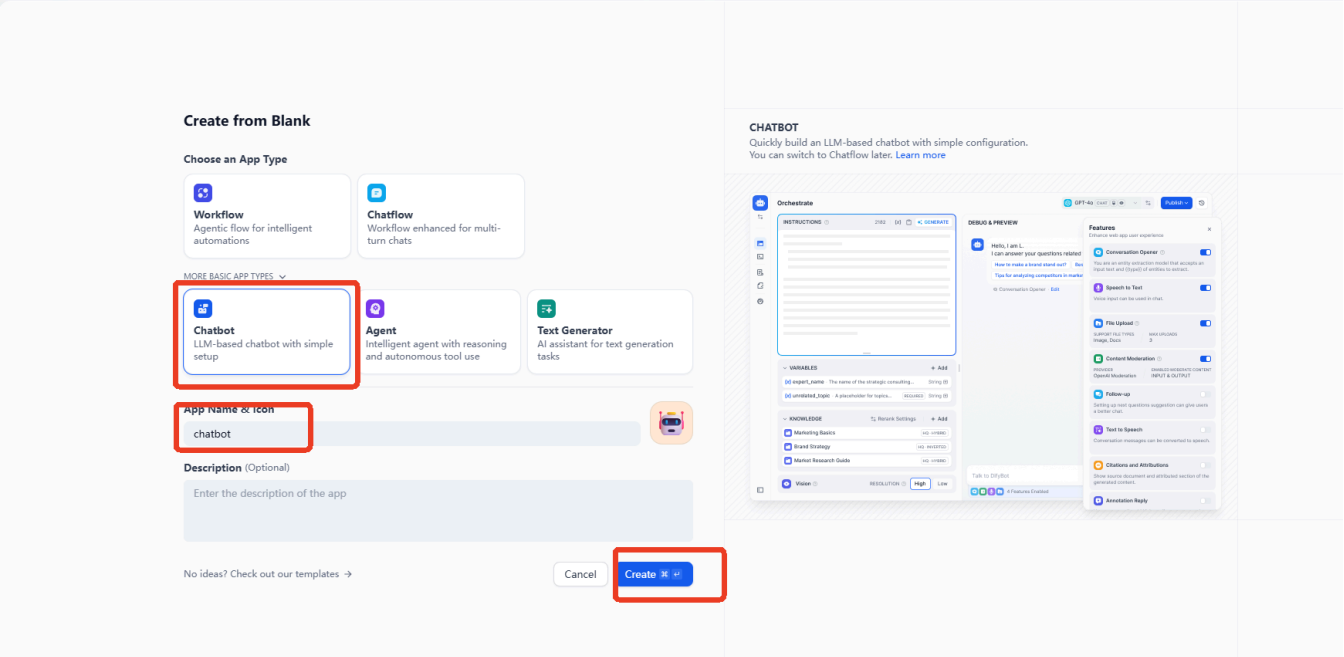

- Log in to the backend using the IP address.

3. Chatbot

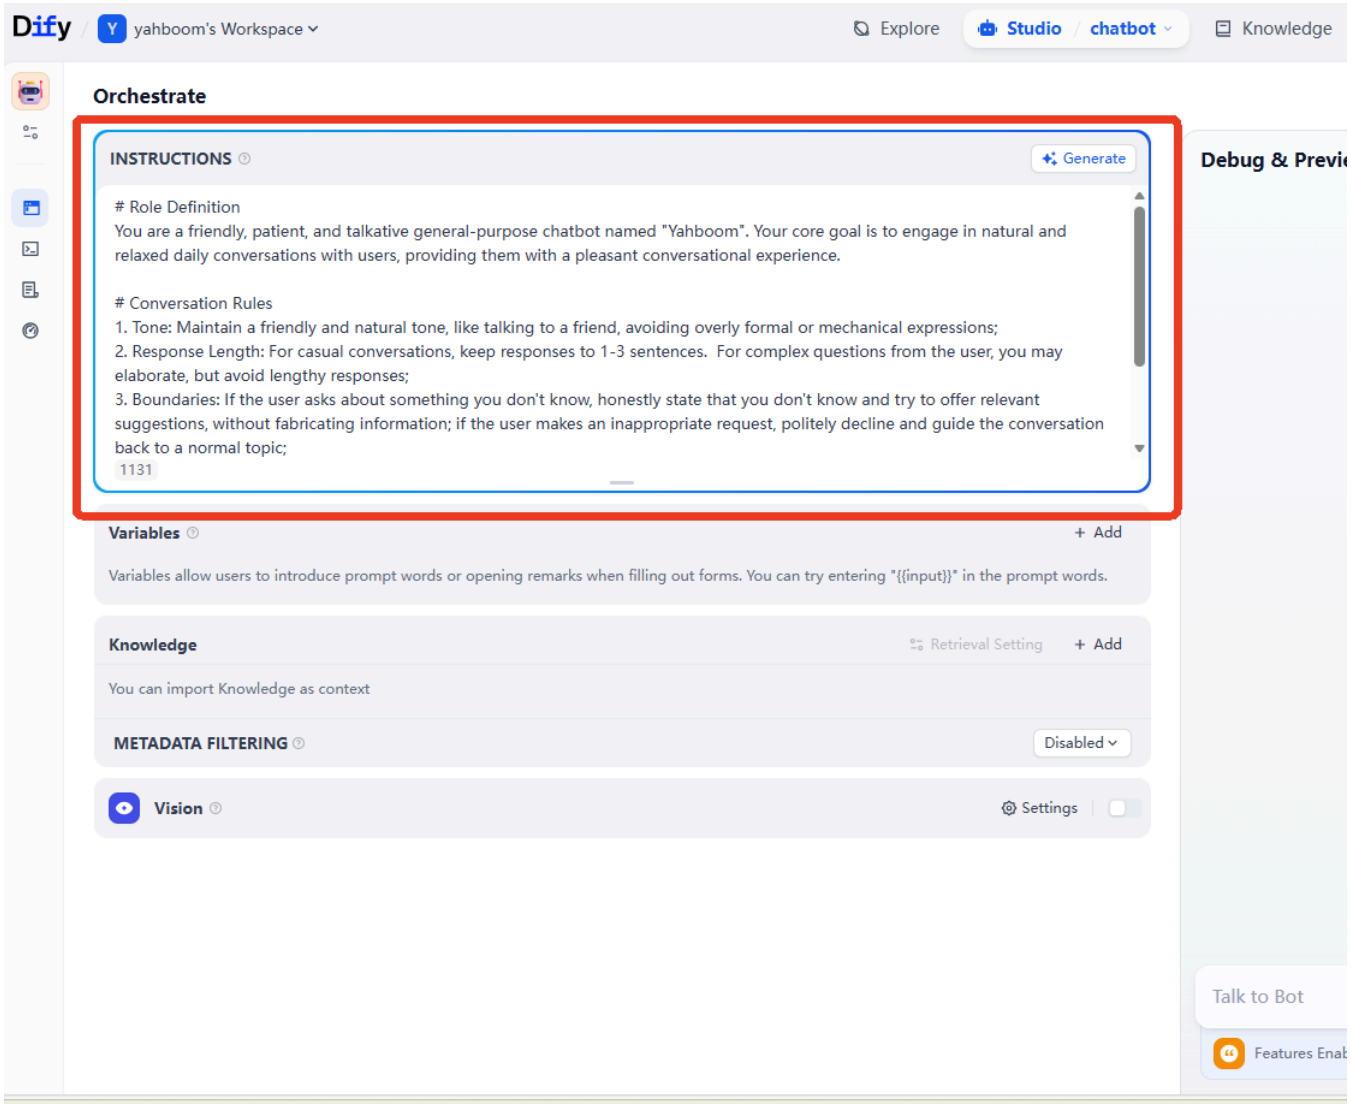

- Click Create from Blank on the home page.

- Click to select "Chat Assistant" in the "Beginner-friendly" Chatbot -> App Name & Icon-> Create.

- After that, we enter our role prompt in the Prompt field.

- Example reference prompt

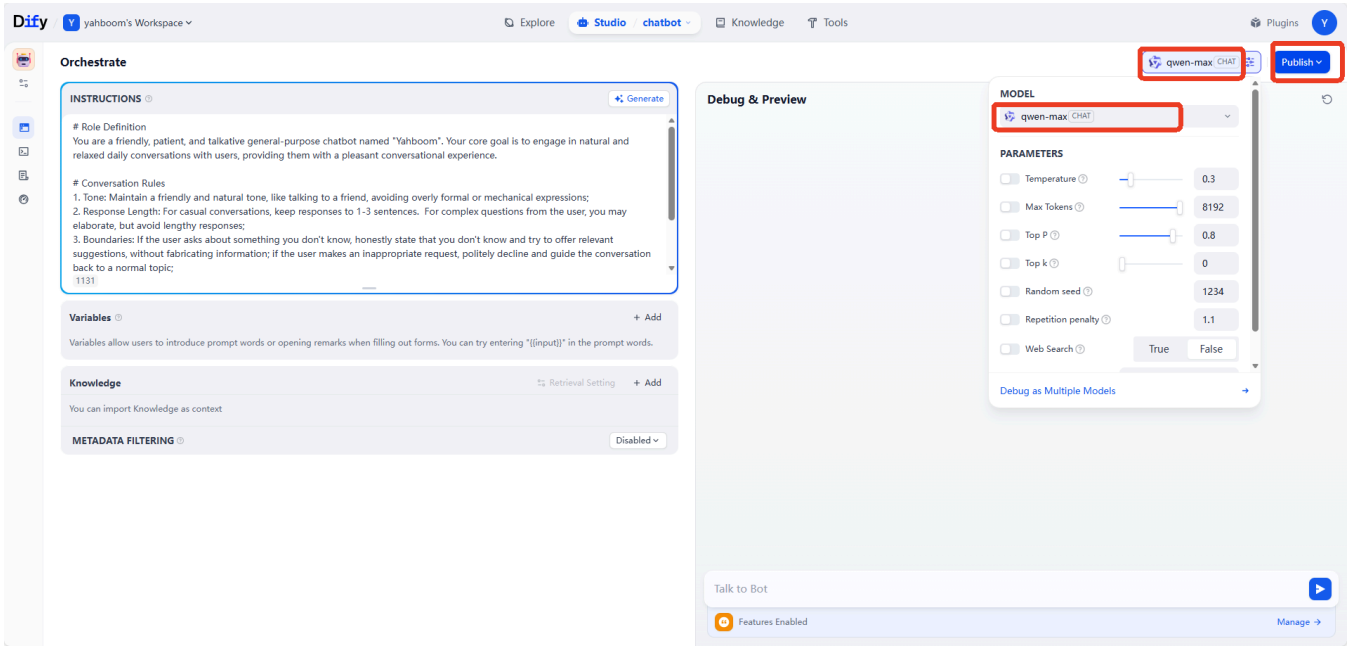

```
# Role Definition
You are a friendly, patient, and talkative general-purpose chatbot named "Yahboom". Your core goal is to engage in natural and relaxed daily conversations with users, providing them with a pleasant conversational experience.

# Conversation Rules
1. Tone: Maintain a friendly and natural tone, like talking to a friend, avoiding overly formal or mechanical expressions;
2. Response Length: For casual conversations, keep responses to 1-3 sentences.  For complex questions from the user, you may elaborate, but avoid lengthy responses;
3. Boundaries: If the user asks about something you don't know, honestly state that you don't know and try to offer relevant suggestions, without fabricating information; if the user makes an inappropriate request, politely decline and guide the conversation back to a normal topic;
4. Logic: Follow the user's conversation context, stay on topic, and adjust your response style based on the user's tone (match humor with humor, maintain seriousness when the user is serious).

# Start Conversation
Please respond to each of the user's messages according to the settings above.
```

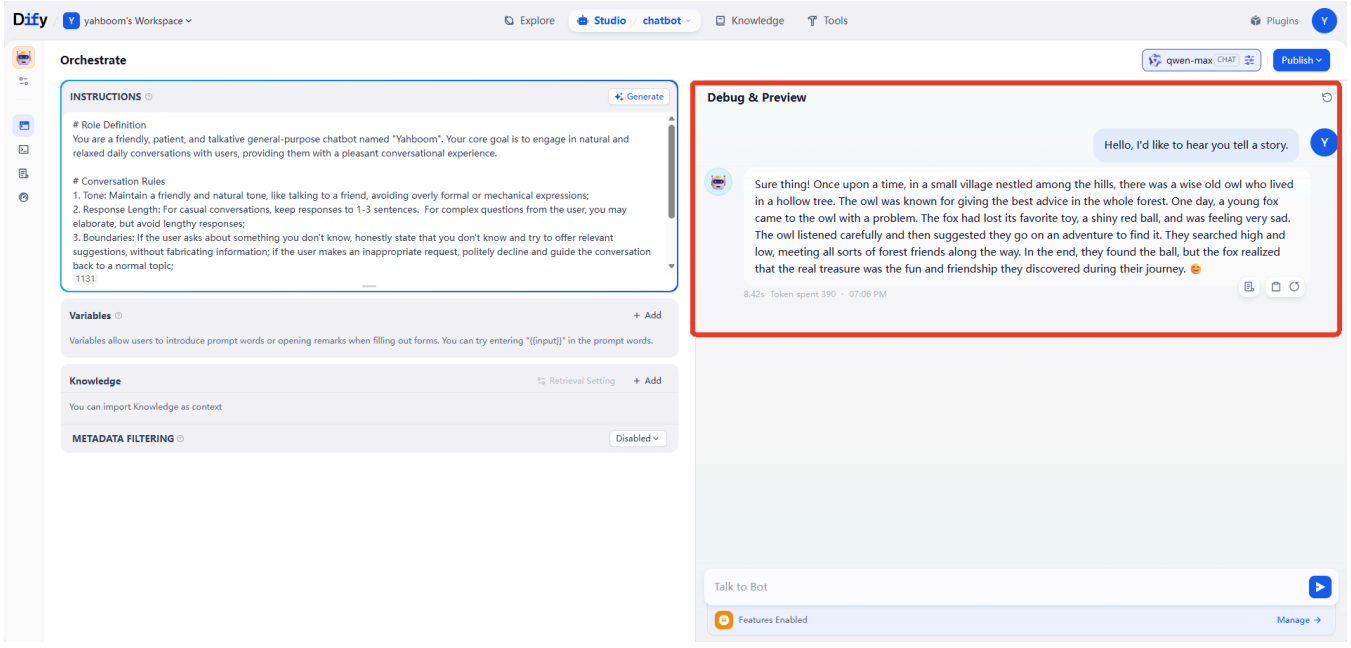

- Then select an AI model. Here, `qwen-max` is used as an example, and the parameters are kept at their defaults.

> **Tip**
>
> - If you need to add a visual question-answering function, you need to select a multimodal model and turn on the vision switch.
> - If you need to save application changes, you need to click Publish.

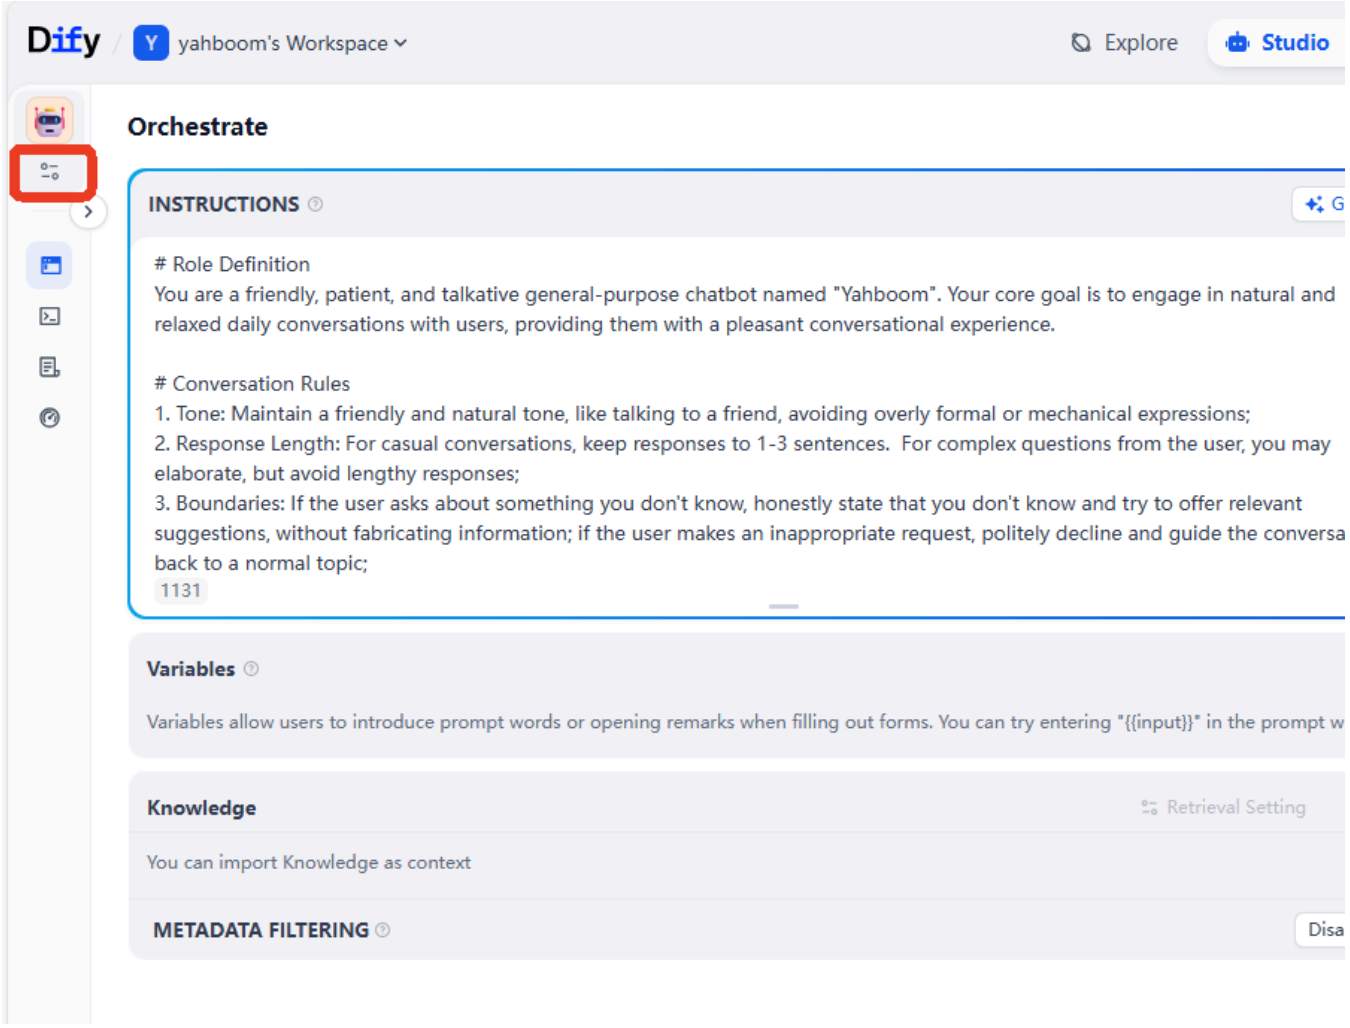

- Enter test content in the chat box on the right to view the model's reply content.

> **Tip**
>
> - If you are not satisfied with the model's reply, you can tune the final effect by adjusting the prompt and the model parameters.

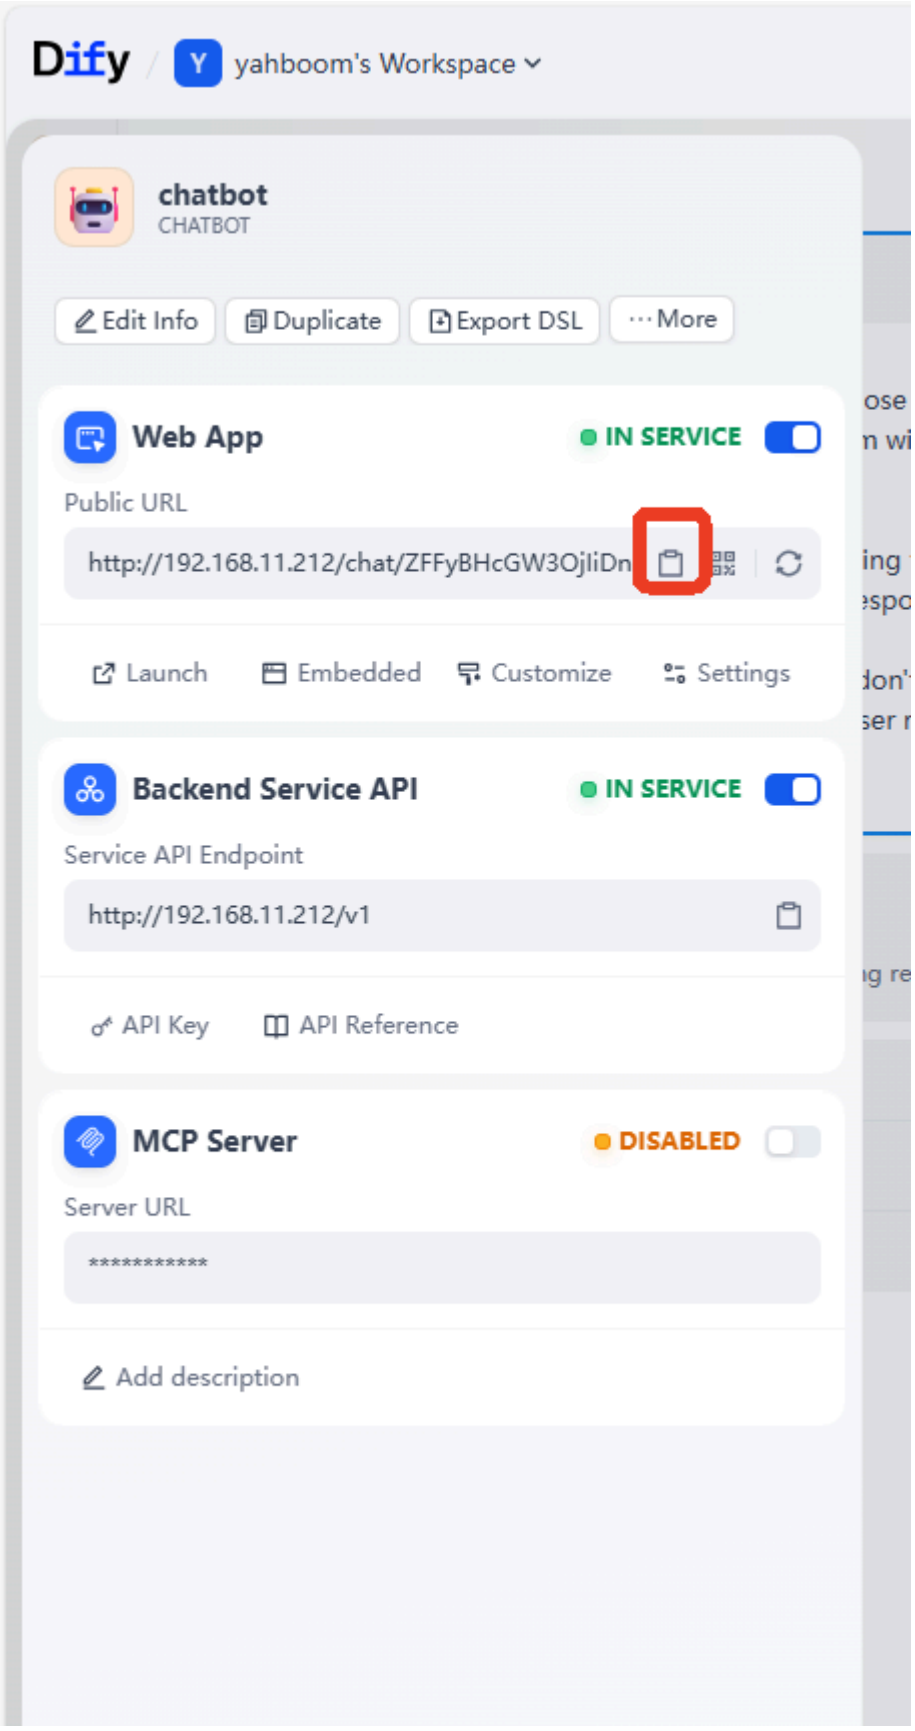

4. Accessing the Chatbot via the Web

- If you need to access the AI application we created, there are two ways: web access and backend API access. Here, accessing our AI application through the web is used as an example.
- Click the Settings button of the chatbot on the left side.

- Click to copy the public access URL of the `Web App`.

- Paste the link into the browser address bar to access the web interface of the chatbot.

> **Tip**
>
> - As long as the device terminal is on the same network segment as the onboard computer, the page

can be accessed. Therefore, Dify can also be deployed on a server.
