2. Introduction to OpenClaw Scheduled Tasks
3. Preparation
4. Demo Example
5. Viewing and Managing Scheduled Tasks

1. Course Content

- OpenClaw Scheduled Tasks is a task automation scheduling feature of the OpenClaw platform that allows users to create robot tasks that trigger at specified times

Course Objectives

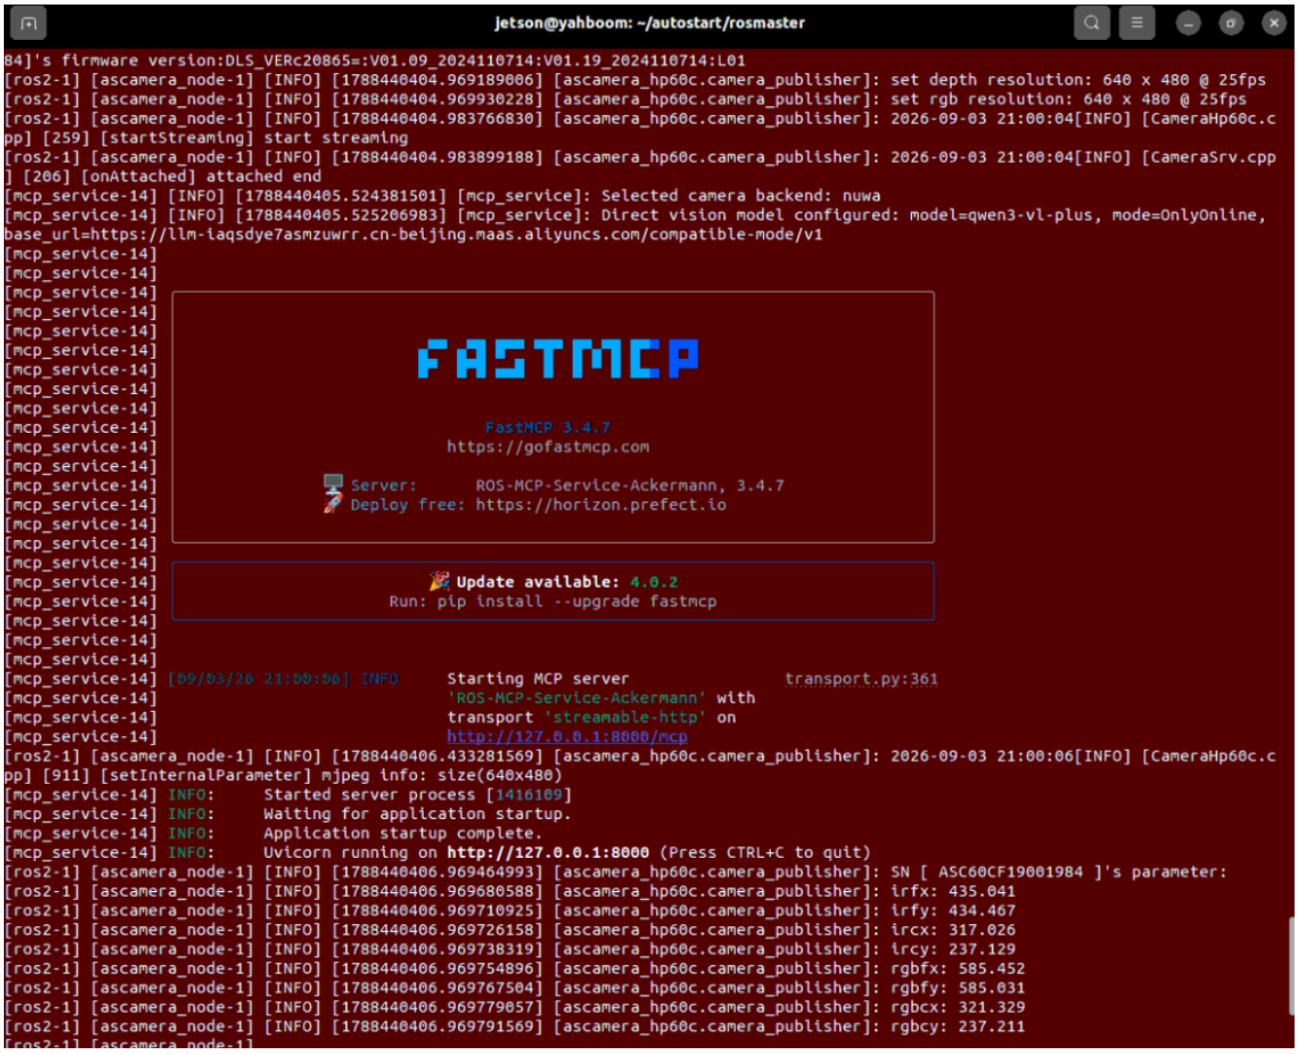

1. Understand the functionality and application scenarios of OpenClaw Scheduled Tasks
2. Master the method of creating scheduled tasks using natural language
3. Master the operations for viewing, managing, and maintaining scheduled tasks

2. Introduction to OpenClaw Scheduled Tasks

- Scheduled Tasks is an intelligent scheduling feature of OpenClaw. Users can create scheduled tasks to have the robot automatically execute specific operations at specified times or intervals
- After creating a scheduled task, OpenClaw will automatically execute the task instructions according to the set schedule and record the execution log for each run

3. Preparation

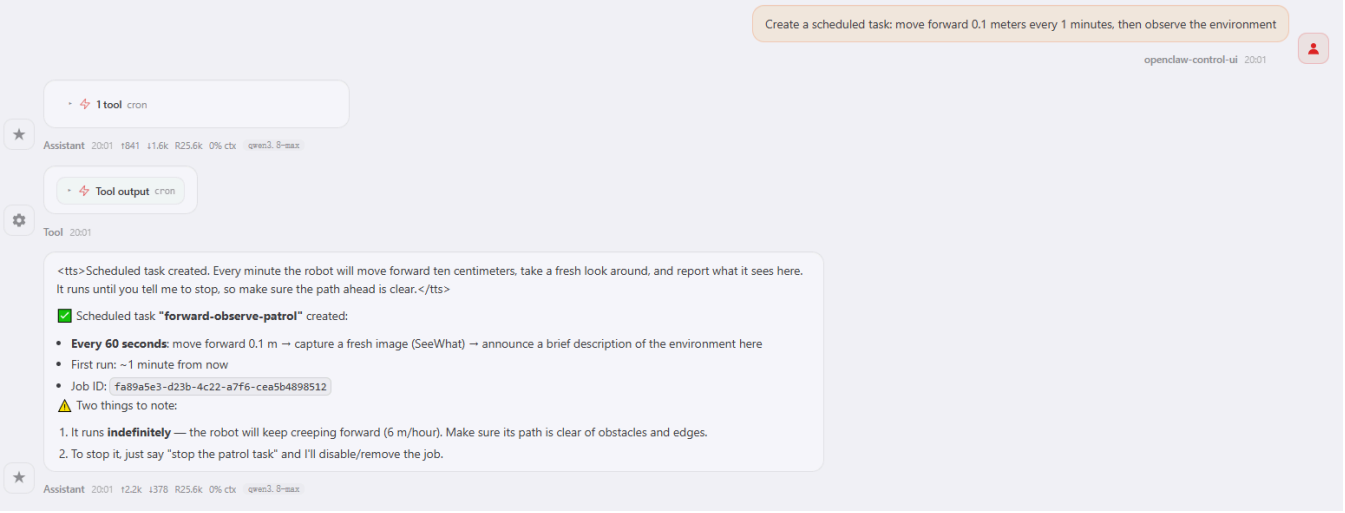

```
ros2 launch dofbot_pro_bringup mcp_service.launch.py
```

4. Demo Example

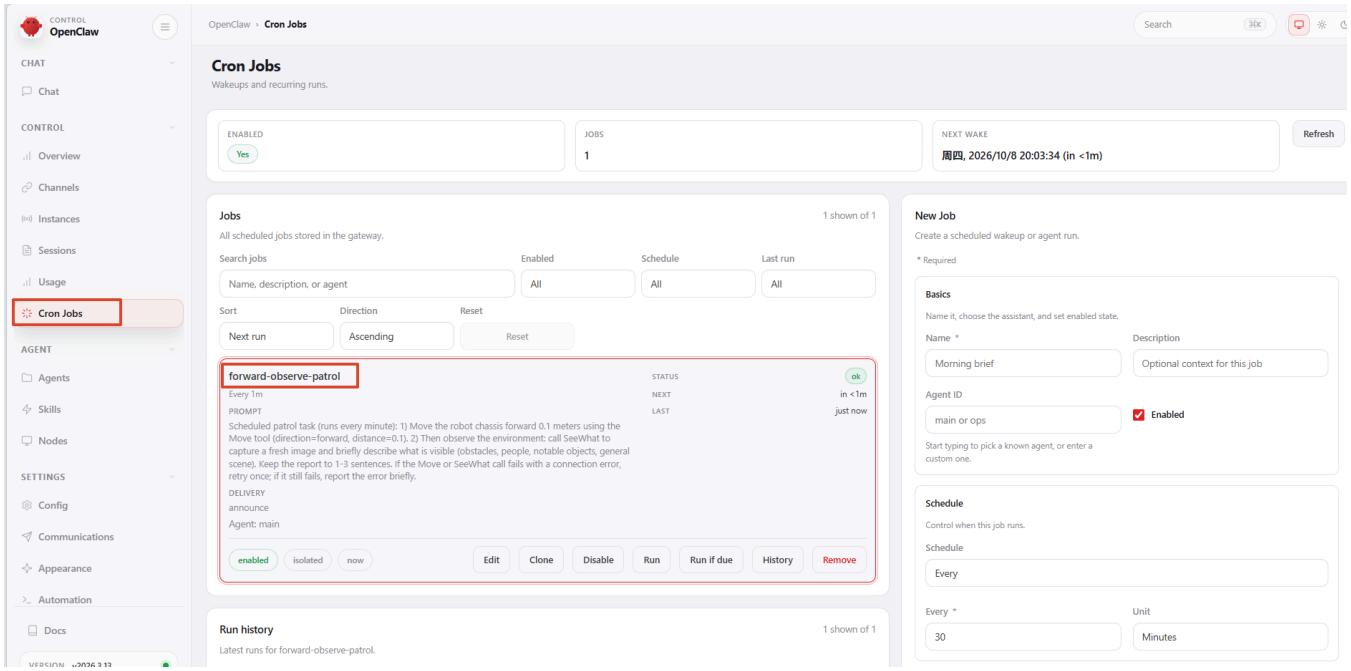

> **Note**
>
> - Any interaction method is acceptable; this example uses web-based interaction

- The simplest way is to directly give instructions to OpenClaw, for example: create a scheduled task: move forward 0.1 meters every one minutes, then observe the environment

5. Viewing and Managing Scheduled Tasks

- Open WebChat, click **Cron Jobs** to view the list of all created scheduled tasks

- In the scheduled tasks list, the following management operations are supported:
  - **Enable/Disable**: Use the switch to control whether the scheduled task is active. When disabled, the task will no longer execute according to schedule
  - **Run**: Manually trigger a scheduled task once, used for quickly verifying if the task is working properly
  - **Remove**: Delete scheduled tasks that are no longer needed
- Click on a scheduled task to view and edit task details, including task description and execution schedule
- In **Run History**, you can see the execution records for each trigger of the scheduled task, including execution time, execution status, and run results

<tts>Patrol step done. I moved forward 0.1 meters and the camera shows only gray textured carpet floor, no obstacles, people, or notable objects in view.</tts>

Patrol update: moved forward 0.1 m successfully. The fresh camera view shows only gray textured carpet flooring filling the frame (camera angled downward), with a dark edge at the top-left corner — no obstacles, people, or notable objects detected in the immediate path.

2026/10/8 20:03:04

Patrol update: moved forward 0.1 m successfully. The camera view shows only a close-up of gray striped carpet/floor texture — no obstacles, people, or notable objects are visible, suggesting the camera is angled down at the ground. Path ahead appears clear at floor level.
